JOURNAL OF BEHAVIORAL MEDICINE – Volume 11, 1988

The *Journal of Behavioral Medicine* is a broadly conceived interdisciplinary publication devoted to furthering our understanding of physical health and illness through the knowledge and techniques of behavioral science. Application of this knowledge to prevention, treatment, and rehabilitation is also a major function of the journal, which will include papers from all disciplines engaged in behavioral medicine research: psychology, psychiatry, sociology, epidemiology, anthropology, health economics, and biostatistics. Examples of typical research areas of interest include: the study of appetitive disorders (alcoholism, smoking, obesity) that serve as physical risk factors; adherence to medical regimen and health maintenance behavior; pain; self-regulation therapies and biofeedback for somatic disorders; sociocultural influences on health and illness; and brain–behavioral relationships that influence physiological function. Articles considered for publication include: theoretical and review articles, experimental studies, technical and methodological articles, and case studies.
